***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, 35, drawn to a first damper component, classified in class 428, subclass 212+.
  - II. Claims 11-20, 36, drawn to a second damper component, classified in class 428, subclass 304.4+.
  - III. Claims 21-33, drawn to a method of making a damper component, classified in class 264, subclass 239+.
  - IV. Claims 34, drawn to a hard disk drive, classified in class 369, subclass 75.11+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-IV and II-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I and II have separate utility such as dampers for vehicles. See MPEP § 806.05(d).
3. Inventions I-III and II-III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as hot plate pressing.
4. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different

Art Unit: 1773

functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation -- Invention I contains a monolithic damper layer while Invention II contains a fragmented damper layer.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. This application contains claims directed to the following categories (a)-(b) of patentably distinct species of the claimed invention:

(a) type of viscoelastomer;

(1) polyacrylate (e.g., claim 3, 13, 22, 23, etc.);

(2) nitrile rubbers and fluoroelastomers (e.g., claim 4, 14, 24, etc.);

(b) composition of first and second sheets;

(1) identical compositions (claim 28);

(2) different compositions (claim 29).

Applicant is required under 35 U.S.C. 121 to elect **a single disclosed species in each category (a)-(b)** for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1773

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. This restriction/election requirement is provided in written form due to its complexity.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
